

wwPDB Data Inconsistency Report: Missing `_struct_asym` Entries

Report Date: 2026-01-18 **Archive Scan Date:** 2026-01-17 **Repository:**
<https://github.com/N283T/fix-struct-asm>

Executive Summary

A systematic scan of the PDB archive identified **3 entries** (out of 243,083 examined) containing `_atom_site.label_asym_id` values that lack corresponding entries in the `_struct_asym` category. All affected cases involve water (HOH) `asym_ids`.

Affected Entries: 1TS6, 2G10, 2K9Y **Impact Rate:** 0.001% of entries examined

Terminology note: In this report, “`asym_id`” refers to `_atom_site.label_asym_id` and `_struct_asym.id` values (not `auth_asym_id`).

Problem Description

Issue

According to the mmCIF dictionary, the `_struct_asym` category defines the asymmetric unit contents and should contain an entry for every `label_asym_id` referenced by `_atom_site`. The affected entries contain atom records with `label_asym_id` values that have no corresponding `_struct_asym.id` definition.

Technical Details

Aspect	Description
Expected behavior	Every unique <code>_atom_site.label_asym_id</code> value has a matching <code>_struct_asym.id</code> entry

Aspect	Description
Observed behavior	Certain water asym_ids are referenced in _atom_site but absent from _struct_asym
Affected category	_struct_asym
Pattern	All missing entries correspond to water (HOH) asym_ids

Affected Entries

PDB ID	Missing _struct_asym.id	Component	Atom Count	Notes
1TS6	C	HOH	7	Single missing asym_id
2G10	F	HOH	147	Single missing asym_id
2K9Y	C, D	HOH	9, 3	Two missing asym_ids

Detailed Findings

1TS6 Asym_id C contains 7 water oxygen atoms referenced in _atom_site but lacks a corresponding _struct_asym entry.

2G10 Asym_id F contains 147 water oxygen atoms referenced in _atom_site but lacks a corresponding _struct_asym entry.

2K9Y Asym_ids C and D contain 9 and 3 water oxygen atoms respectively, both referenced in _atom_site but lacking corresponding _struct_asym entries.

Example: 2G10

_struct_asym category (complete):

```
_struct_asym.id
_struct_asym.pdbx_blank_PDB_chainid_flag
_struct_asym.pdbx_modified
```

```
_struct_asym.entity_id
_struct_asym.details
A N N 1 ?
B N N 2 ?
C N N 3 ?
D N N 4 ?
E N N 5 ?
```

Note: Asym_id F is not defined in `_struct_asym`, although entity 5 (water) exists and should be referenced.

`_atom_site` records referencing asym_id F (first 5 of 147):

```
_atom_site.group_PDB
_atom_site.id
_atom_site.label_atom_id
_atom_site.label_comp_id
_atom_site.label_asym_id      # <-- Missing from _struct_asym
_atom_site.label_entity_id    # <-- References entity 5 (water)
_atom_site.label_seq_id
...
HETATM 2706 0 HOH F 5 . ...
HETATM 2707 0 HOH F 5 . ...
HETATM 2708 0 HOH F 5 . ...
HETATM 2709 0 HOH F 5 . ...
HETATM 2710 0 HOH F 5 . ...
```

The `_atom_site.label_asym_id` value “F” references entity 5 (water) but has no corresponding entry in `_struct_asym.id`.

Methodology

Detection Process

1. Extracted all unique `_atom_site.label_asym_id` values from each entry
2. Extracted all `_struct_asym.id` values from each entry
3. Identified entries where the atom site set contains values absent from the `struct_asym` set

Scan Parameters

Parameter	Value
Total entries scanned	243,083
Mirror sync date	2025-10-10
Scan date	2026-01-17
Verification date	2026-01-18
Archive source	PDB mmCIF archive (mirror) / RCSB (verification)

Note: The initial scan used a local mirror synced approximately 3 months prior. To ensure the findings remain valid, the affected entries were re-downloaded directly from RCSB on 2026-01-18 and the inconsistencies were confirmed to persist.

Validation

1. **Initial detection:** Systematic scan of local PDB mirror (2026-01-17)
2. **Verification:** Re-downloaded affected entries from RCSB (2026-01-18) and confirmed the inconsistencies persist in the current archive
3. **Fix validation:** Generated corrected files and re-scanned to confirm zero remaining inconsistencies

Recommendations

1. **Remediation:** Update the affected entries to include the missing `_struct_asym` definitions
2. **Prevention:** Consider adding a validation step to the deposition/processing pipeline that verifies all `_atom_site.label_asym_id` values have corresponding `_struct_asym.id` entries before release

Supplementary Materials

Corrected mmCIF files and scan results are available at the GitHub repository:

- `fixed/1ts6.cif.gz`
- `fixed/2g10.cif.gz`
- `fixed/2k9y.cif.gz`
- `reports/data/results.json`

Repository: <https://github.com/N283T/fix-struct-asm>

Reproducibility

This report was generated using automated detection tools. The methodology, scan results, and corrected files are publicly available for verification at the repository above.
